Education

PES University, Bengaluru - MBA, Operations & Business Analytics (Minor) - Sep 2025 - Sep 2027 - CGPA 7.86
Nitte Meenakshi Institute of Technology, Bengaluru - B.E., Computer Science Engineering - 2020 - 2024

Experience

- Storage Engineer, Hewlett Packard Enterprise (HPE), Oct 2024 - Jul 2025
- Managed L1/L2 incident queue for 50+ enterprise customers
- Performed root-cause analysis on infrastructure failures
- Maintained SLA adherence and resolved tickets across multiple timezones

Projects

- Inventory Optimization - ABC-XYZ Safety-Stock Policy at Scale (2026)
- Classified 166,720 product-store combinations via ABC-XYZ analysis across the full Corporacion Favorita dataset (125.5M transaction rows, 54 stores, 2013-2017), computing differentiated safety-stock policies, using Python, SQL, DuckDB, pandas
- Found that differentiated inventory policies, assumed costlier at small scale (+20.7% on a 575 SKU-store sample), actually turn out 1.14% cheaper at full scale - the savings hide in the long tail of low-value, erratic-demand items invisible in smaller samples
- Rebuilt the pipeline (load, classify, safety stock, promotion/holiday analysis) to run on the full dataset in under a minute, down from ~90 minutes, using indexing, early-exit guards, and DuckDB for the heaviest aggregations
- Support Queue Simulation (2026)
- Built a discrete-event simulation modeling multi-tier service queues with non-stationary Poisson arrivals and lognormal service times, using Python, SimPy, SciPy, pandas
- Built an interactive browser dashboard (JavaScript, Chart.js) with a validation suite
- Found priority queuing protects critical tickets while degrading low-priority SLAs; EDF scheduling offers a fairer alternative
- Mental-Health Treatment Prediction (2022-2024)
- Built a classifier predicting treatment-seeking behavior among tech workers from 1,259 survey responses across 26 features, using Python, scikit-learn, Flask, pandas, NumPy, Matplotlib
- Tested SVM (0.85 accuracy), Random Forest (0.83), Decision Tree (0.79), and a stacked ensemble (0.83); reported honestly that the ensemble did not outperform the SVM baseline

Skills

Operations: Process improvement, root-cause analysis, capacity & staffing planning, SLA and incident management, queueing theory, supply chain fundamentals, inventory management
Analytics: Discrete-event simulation, regression, forecasting, hypothesis testing, sensitivity analysis, A/B reasoning, ABC-XYZ classification
Technical: Python (pandas, NumPy, SciPy, SimPy, scikit-learn), SQL, DuckDB, Advanced Excel, JavaScript, Git
Tools: Jira, Confluence, ServiceNow, Matplotlib, Chart.js

Certifications

Lean Six Sigma: Green Belt Fundamentals - Alison (CPD Certified), 2026
Enterprise Risk Management, Level 1 Course - Institute of Risk Management (course completion), 2026
Advanced Software Engineering Job Simulation - Walmart USA via Forage
