

Koushik C

MBA (Operations) · Business Analytics Minor — Targeting Operations & Analyst Roles

Bengaluru, India | +91 82772 73661 | chunchukoushik232@gmail.com | [linkedin.com/in/koushik-c](https://www.linkedin.com/in/koushik-c) | github.com/koushik2302

EDUCATION

Master of Business Administration Sep 2025 – Sep 2027

PES University, Bengaluru — Major: Operations · Minor: Business Analytics

- CGPA 7.64 / 10. Coursework: Production & Operations Management, Supply Chain, Business Analytics, Statistics, Managerial Economics, Financial Accounting.

B.E., Computer Science & Engineering 2020 – 2024

Nitte Meenakshi Institute of Technology, Bengaluru

EXPERIENCE

Storage Engineer Oct 2024 – Jul 2025

Hewlett Packard Enterprise (HPE)

- Ran an **L1/L2 incident queue for 50+ enterprise customers globally**, triaging by severity and business impact and closing within SLA across time zones.
- Managed a **20+ concurrent ticket queue** at peak load — prioritisation, escalation routing, and stakeholder communication in parallel.
- Performed **root-cause analysis on recurring infrastructure failures**, targeting repeat defects rather than one-off fixes to reduce ticket re-open rates.

PROJECTS

Service Queue Simulation — Staffing, SLA Policy & the Utilisation Cliff 2026

Independent · Python (SimPy), JavaScript — github.com/koushik2302/queue-sim

- Built a **discrete-event simulation** of a multi-tier support queue (non-stationary Poisson arrivals, lognormal service times, 4 severity tiers, 4 scheduling policies) to locate the utilisation threshold at which SLA compliance collapses.
- **Key finding:** priority scheduling protects critical tickets while silently degrading low-priority ones — at 95% utilisation, S1 waits held at ~0.14h while S4 p95 wait reached **6.3 hours**, yet the SLA dashboard still read 97% green. Recommended tracking **p95 wait by tier**, not aggregate pass/fail.
- **Validated the engine against the Erlang-C closed form before drawing conclusions** — 23/24 checks inside the 95% CI. Ran $\pm 30\%$ sensitivity analysis to separate structural findings from parameter artefacts.
- Shipped an **interactive browser dashboard** (JavaScript, Chart.js) so any reviewer can re-run every experiment, including the validation suite, without taking the results on trust.

Predicting Mental-Health Treatment Seeking in Tech 2024

Capstone · Python, scikit-learn, Flask — github.com/koushik2302/mental-health-prediction

- Trained and compared SVM, Random Forest, Decision Tree, and a stacked ensemble on **1,259 survey responses (26 features)** to predict treatment-seeking behaviour; deployed the model behind a Flask application.
- **Reported that the stacked ensemble (0.83) failed to beat a plain SVM baseline (0.85)** — added complexity delivered no gain, a result worth reporting rather than concealing.

SKILLS

Operations	Process improvement, root-cause analysis, capacity & staffing planning, SLA and incident management, queueing theory, supply chain fundamentals
Analytics	Discrete-event simulation, regression, forecasting, hypothesis testing, sensitivity analysis, A/B reasoning
Technical	Python (pandas, NumPy, SciPy, SimPy, scikit-learn), SQL, Advanced Excel, JavaScript, Git
Tools	Jira, Confluence, ServiceNow, Matplotlib, Chart.js

CERTIFICATIONS

- **Lean Six Sigma: Green Belt Fundamentals** — Alison (CPD Certified), 2026
- **Enterprise Risk Management, Level 1 Course** — Institute of Risk Management (course completion; not the IRM Global Level 1 examination certificate), 2026
- **Advanced Software Engineering Job Simulation** — Walmart USA via Forage
